

# Implants for life

 **DENTSPLY**  
IMPLANTS

"I would definitely make the same choice again!"

"I'm a professional singer and my looks are important," says Carola. "At the age of 28 I started to get problems.

To grind down healthy teeth to attach bridges was out of the question for me. Instead, implant treatment was my choice and I am very satisfied with the result."

Carola Becker

"I never thought it would be that straightforward"

"In 1995, two teeth in my right upper jaw had to be extracted and I was given a conventional dental bridge," Tim remembers.

"One evening, 12 years later, I was eating spareribs when the root of one tooth that was supporting the bridge cracked."

Tim Anderson

"Simply marvelous!"

"Getting dental implants has made all the difference," says Britt-Lis Nilsson.

"Now I don't have to worry about my teeth falling out and I can eat all my favorite foods again.

It has meant so much to me."

Britt-Lis Nilsson

## Like natural teeth

Dental Implants are a safe, reliable and well-proven solution for permanently replacing one or more missing teeth.

With dental implants you can laugh and eat confidently — knowing that your new teeth are securely held in place.

## Benefits of dental implants

- Eliminate the need to grind down healthy adjacent teeth as required by traditional crown and bridge procedures.
- Help to maintain facial structures and the bone tissue in the jaw.
- Eliminate the use of denture adhesives and help to eliminate the discomfort of ill-fitting dentures.

## What is a dental implant?

A dental implant is a small screw that acts as an artificial tooth root when placed in the jawbone. It is made of titanium, a metal well documented for integrating with human bone to create a stable foundation. An abutment is then fitted to the top of the implant to create an anchor for the placement of a crown, bridge, or prosthesis.

## A proven therapy

Since the 1960s, dental implants have been used successfully in millions of people worldwide as a long-term solution for renewed quality of life.

Implants by DENTSPLY Implants are developed based on biological and biomechanical principles. Our implants are backed by extensive clinical and scientific documentation.

The design of implants by DENTSPLY Implants also allows for shorter healing times, less chairtime for you as a patient, and the confidence of predictable long-term and esthetic results that only decades of clinical research can bring.

Speak with your dentist to find out if you are a candidate for dental implants and what the treatment can mean for you.

## Solutions for every situation

By acting as a tooth root, a dental implant provides a stable foundation for a replacement tooth that stays securely in place, so you can eat, speak, and smile with confidence.

### Replacing a single tooth

Dental implants are an ideal solution for replacing a single missing tooth and eliminating the need to grind down healthy adjacent teeth as required by traditional crown and bridge procedures.

### ...or several teeth

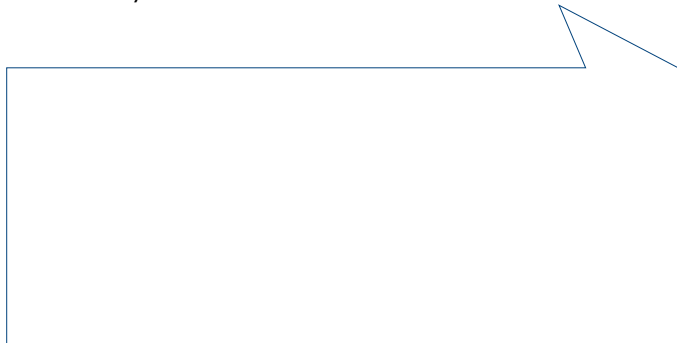

Implants are also an optimal solution for replacing several teeth and can be placed to support individual crowns or a single bridge. Because implants act as replacement tooth roots, support from adjacent healthy teeth is not necessary.

### ...or all of your teeth

In addition to looking and functioning like natural teeth, implant-supported dentures and full bridges are designed to be an effective and stable long-term solution. Implants eliminate the need for adhesives to keep dentures in place, as well as the sores and pain often associated with ill-fitting dentures. By stimulating the jawbone, implants also help to maintain the bone and the natural shape of your face.

Learn how quality dental implants by DENTSPLY Implants can give you the beauty of natural teeth — speak with your dentist today.

DENTSPLY Implants has a long tradition of research and product development

Proven reliability

Quality assured production

Implant warranty
